SPF is a value that indicates the efficiency of skin protection from UVB rays; PA indicates protection from UVA rays. The international standard for measuring the SPF and PA value is set for a 2mg layer on each cm². Use them as a guideline when selecting your products. These items work well in conjunction with other cosmetics offering UV protection. Be sure to apply a sufficient amount evenly and thoroughly to the skin and reapply frequently. Note that small amounts of the product may not offer sufficient UV protection. To keep UV protection, reapply the product if it wears off, such as after using a towel. **Attention:** If hand cream (Refresh Aroma) gets on your clothes, rinse them immediately with detergent. Avoid using chlorine bleach.
